

MUDDY CREEK WATERSHED CONSERVATION PLAN

A Plan for Enhancing, Sustaining, Restoring, and Protecting Our Shared Resource

We need **YOUR** knowledge of Muddy Creek!

What is a Watershed Conservation Plan (WCP)?

“A comprehensive watershed or river corridor-based study. This study requires an inventory of existing natural, recreational and cultural resources, analysis of the issues, concerns and threats to river resources and values, and specific recommendations that set forth priorities and actions leading to the development of a long-term watershed management program.”

This is YOUR watershed!

What is needed for the WCP?

The plan will include the development of a long-term management strategy that establishes some priorities for the preservation, conservation and restoration of the watershed. We want to hear from YOU, the residents and landowners of the watershed, as we begin the planning process.

Keys to success

The Muddy Creek WCP can only be as successful as we make it. The plan is limited only by our imagination. The plan is ours, so we have the ability to decide what we want and need it to be. Your involvement is critical. Based on experience, the following items have been identified as keys to the success of the project:

- ❖ Municipal involvement from the start
- ❖ Active Steering Committee
- ❖ Strong public outreach/involvement program
- ❖ Interested stakeholders
- ❖ Involvement of local, state, and federal agencies as deemed appropriate
- ❖ Data availability and quality
- ❖ **IMPLEMENTATION!**

The Pennsylvania Department of Conservation and Natural Resources has provided the following partners with funding for this project:

- ❖ Muddy Creek TU
- ❖ York County Conservation District
- ❖ York County Planning Commission
- ❖ The Watershed Alliance of York
- ❖ The Conewago Canoe Club
